

Tangerine Confectionery Case Study

Type: Drainage
Sector: Food and Drink

Tangerine Confectionery

Tangerine Confectionery are the leading independent sugar confectionery and branded popcorn producer in the UK.

Vuba has carried out numerous projects for Tangerine Confectionery across numerous sites over the years, but this specified project posed unique challenges. We had to replace 60m of existing failing drainage channels using stainless steel drainage in the middle of a live production facility.

Method:

We installed tents to each phase we were working on, equipped with vacuum extractors. All of the mechanical cutters used to remove the old channel were attached to a three motor vacuum within the tent to prevent dust.

We then set the new drainage in place using high strength food safe polyurethane resin mortar. The following we overlaid with a non taint and non toxic polyurethane resin screed to give a heavy duty food safe finish.

The project was completed in two weeks and did not disturb the existing production going ahead around the working area.

We are extremely happy Vuba managed to replace our failing drainage channels with a brand new bespoke stainless steel system mid production. We had very few issues because the lads on site are used to working in a food production facility and the kit they used to minimise the dust to nothing was remarkable. I'd certainly recommend them for any future projects in a food and drink environment.
